in Daniel Peretz

danielperetz770

A dynamic and self-driven web developer, I possess a profound passion for problem-solving and front-end technologies. Specializing in React.js and TypeScript, my expertise lies in designing and constructing contemporary user interface components. I bring a robust understanding of JavaScript, CSS, and HTML, complemented by proficiency in development tools such as Git. My proactive approach to learning and eagerness to embrace challenges equip me to contribute effectively to a front-end development team.

TECHNICAL PROFICIENCY

- Languages & Frameworks: HTML/CSS, JavaScript, TypeScript, Node.js, Express, React
- Tools & Technologies: GitHub, MongoDB, mui, Bootstrap, Firebase
- Additional Skills: Browser-based debugging, Effective use of search engines for problem-solving, Knowledge in AI

KEY PROJECTS

Admin Dashboard

- Description: This project was an enriching experience, involving the utilization of mui library color palettes, integration of icons and graphs from Nivo, and the implementation of a global hook.
- URL: admin-dashbord770.web.app
- GitHub: github.com/danielperetz770/admin-dashbord

CV Generator

- Description: Developed using React.js, involving correct implementation of hooks and features like Google integration for importing personal details.
- URL: fullstack-los-angeles.web.app
- GitHub: github.com/danielperetz770/Cv-generator

Blog App

- Description: A React.js-based application featuring user login, post creation, and registration components. Backend with Node.js, Express, MongoDB, and implemented cookies for session management.
- GitHub: github.com/danielperetz770/Blog-App770
